

**FISH FAUNA IN GIANH RIVER BASIN,
QUANG BINH PROVINCE, NORTH CENTRE VIETNAM**

Ho Anh TUAN, Ngo Xuan QUANG*, Laurențiu UNGUREANU**, Dumitru BULAT**

Vinh University, Moldova State University

*Institute of Tropical Biology – Ho Chi Minh city – Vietnam

** Institute of Zoology (Academy of Sciences of Moldova)

We carried out 12 field surveys in 2003 - 2011 at 36 study sites and collected 5699 specimens. Over time of analysis, we have identified 181 fish species belong to 139 genera, 64 families of 16 orders of the ichthyofauna in Gianh River, 5 rare species recorded in the Red Book of Vietnam (2007), 84 species having economic value, 68 species in upstream, 64 species distributed in the middle, 61 species in downstream and 100 species in the estuary.

Keywords: Cypriniformes, Perciformes, Fish fauna, Phong Nha – Ke Bang, classification, Vietnam, Gianh river, Quang Binh.

**IHTIOFAUNA DIN BAZINUL RÂULUI GIANH,
PROVINCIA QUANG BINH, VIETNAMUL CENTRAL DE NORD**

În perioada anilor 2003-2011 au fost efectuate 12 cercetări de teren la 36 de situri și au fost colectate 5699 de exemplare. În urma analizelor îndelungate am identificat 181 de specii de pești din cadrul a 139 genuri, 64 de familii cuprinse în 16 ordine ale ihtiofaunei din bazinul râului Gianh. Dintre acestea, 5 specii rare sunt înregistrate în Cartea Roșie a Vietnamului (2007), iar 84 de specii au valoare economică. 68 de specii au fost colectate în amonte, 64 de specii distribuite în cursul mijlociu al râului, 61 de specii în aval și 100 de specii din estuar.

Cuvinte-cheie: pești Cipriniforme, pești Perciforme, ihtiofauna, Phong Nha – Ke Bang, clasificare, Vietnam, râul Gianh, Quang Binh.

Introduction

The Gianh River in Quang Binh province in north center region Vietnam is about 158 km long and 4680 km² large. It starts from level 2017 m high of Co Pi mountain of Truong Son strains before running around in some districts of Quang Binh province such as Minh Hoa, Tuyen Hoa and Quang Trach. In addition, Son River (Phong Nha River) is a small branch in the north of this tributary with many cave system, underground streams from the Thuong Trach village, Bo Trach district and run through the Phong Nha – Ke Bang cave system then combine with Gianh River in My Trach village, Bo Trach district before reach up to the East Sea by Gianh estuary

Species composition of fish fauna in this region was investigated by Ho Anh Tuan, Nguyen Thai Tu and collaborators in the Con tributary, Phong Nha – Ke Bang National Park [27, 28, 29]. Nguyen Thai Tu, Ngo Si Van and Mai Thi Thanh Phuong [15, 20] had been studied insufficiency of species composition of fish fauna in the mainstream of Gianh River. It indicated that there was not full research of fish fauna in whole Gianh River basin. Hence, research on fish fauna in the Gianh River is very necessary to understand how biodiversity of fish and provide full scientific database for bio - conservation and fishing planning, sustainable exploration in special protection for the Phong Nha – Ke Bang National Park. Therefore, we take into account to study the topic “Fish fauna in Gianh river basin, Quang Binh Province, North Centre Vietnam”

1. Material and methods

Fish specimens were collected mainly from fishing men in these survey regions. Fishing tools are fishnets, rackets, casting – net, multi size fishing – rods and also professional tools of fish men such as: fishing basket, fishing traps, etc. Some other specimens was bought from local people. All samples were given full information in field trip diary, sampling notes, taking pictures and fixed with formaline 8- 10% and reserving with formaline 5% in Animal Laboratory of Department of Biology, Vinh University.

We use the following materials to Identification species: Chen Yiyu et al. (1998); Chu Xinluo, Zheng, Bashan, Dai Dingyuan (1999); Do Thi Nhu Nhungh (2007); Freyhof, J., D.V. Serov (2001); Freyhof, J.F. Herder (2002); Hartel K. E., T. Nakabo (2003); Imamura, H., M. Komada (2006); Johnson T. F. C., Herman T. C. W. (1965); Knapp, Smith, Heemstra (1986); Kottelat, M. (1990, 2000); Mai Dinh Yen (1978, 1992); Menon A. G. K. (1977); Nakabo T (1982, 1983); Nguyen Huu Phung (2001); Nguyen Khac Huong (1991, 2007); Nguyen Nhat Thi (1991, 2001); Nguyen Van Hao, Ngo Sy Van (2001); Nguyen Van Hao (Vol. 2, Vol. 3); Nguyen Van Luc, Le Thi Thu Thao, Nguyen Phi Uy Vu (2007); Prokofiev A. M. (2010); (Rainboth, W.J) 1996; Roberts, T. R. (1998); Tetsji Nakabo (2002); William P. D. (1966); Yokogawa K., H. Endo, H. Sakaji (2008); Yue Peiqi et al (2000);

List of classes, Orders, families and subfamilies is sorted by William N. Eschmeyer and Jon David Fong 2015. Genera of subfamilies and species of genera is sorted by a to z. [39, 40].

2. Results and discussion

We conducted 12 field surveys in 2003 - 2011 at 36 study sites and collected 5699 specimens. Over time of analysis, we have identified 181 fish species belong to 139 genera, 64 families of 16 orders distributed in Gianh river basin in Quang Binh - North Central of Vietnam.

Total		5	84	68	64	61	100

Note: - 1: Species in the Vietnam Red Book 2007
 - 2: Species with precious economic values
 - a: Upstream; b: Middle; c: Downstream; d: Estuary

Table 1 indicates that Order Perciformes is most diversity in number of families, genera and species (30 families with 46.9% of total family, 57 genera with 41 % genera and 77 species with 42.5% total species) and order Cypriniformes is second high diversity (37 genera with 26.6% of total and 53 species with 29.3% of total). The rest orders were less diversity.

According to Vietnam Red Book 2007, there were 5 species identified in the Gianh River belonging to conservation list such as: *Anguilla marmorata*, *Konosirus punctatus*; *Hypsibarbus annamensis* (Level VU), *Clupanodon thrissa* (Level EN) and *Bostrychus sinensis* (Level CR). In which, 2 species: *Anguilla marmorata* and *Clupanodon thrissa*, were all found many time in high quantity. Some species such as *Hypsibarbus annamensis*, *Clupanodon thrissa* and *Bostrychus sinensis* were found only 1 time with low quantity.

In our observation, there were 84 species providing quite high yield in the Gianh tributary. These species are also precious marketing and local people consume them every day. Therefore, these species were considered as economic development for local fish – men in this river basin.

Conclusion

Twelfth survey on the fish species composition of Ganh River basin, Quang Binh Province, North Centre Vietnam were carried out from 2003 to 2011. 181 fish species belong to 139 genera, 64 families of 16 orders are recorded, 5 rare species recorded in the Red Book of Vietnam (2007), 84 species having economic value, 68 species in upstream, 64 species distributed in the middle, 61 species in downstream and 100 species in the estuary.
